

The powerful BVC BLACKLINE with the new two-layered motor protection filter made of **CORDURA®** fabrics.

The Swiss Association for Electrical Technology SEV has tested all BVC models and rated them as functional, safe and appropriate. BVC has received the SEV certification for all its central vacuum cleaners.

Technical Data

	C 600 series	S 600 series	S 700 series
max. suction power	approx. 680 Airwatt	approx. 700 Airwatt	approx. 730 Airwatt
engine power	1800 Watt	1800 Watt	2000 Watt
max. air volume	approx. 224 m³/hour	approx. 234 m³/hour	approx. 241 m³/hour
max. vacuum	approx. 296 mbar	approx. 305 mbar	approx. 315 mbar
suitable for	2-5 inlets / 55 m of piping	5-8 inlets / 80 m of piping	8-11 inlets / 120 m of piping
container volume	12 liter	20 liter	20 liter
dimensions	80 cm x 30 cm	108 cm x 35 cm	108 cm x 35 cm
weight	11,8 kg	17 kg	17 kg
control electronics	analog	analog or digital	analog or digital

Special Features

Soft Start :
The soft-start of the motor prevents the motor from running at full power when the vacuum is turned on. Less wear and tear and less vibrations when starting are the results.

TRIAC-Control:
The TRIAC control controls the vacuum power of the motor. Vacuum hoses with Three-Stage-Switch can control the motor power from OFF to 50% and 100%. With the potentiometer of the SWIVEL vacuum hose a variable vacuum power is possible.

Digital control system

Models with digital control system offer you more comfort and safety. The menu in the digital electronic box has five different functions which can easily be controlled with two buttons. The display shows, depending on the menu you choose, different views.

The following menus can be selected:

Status: suction capacity level & motor temperature

Fill level: Filter filling level

Leak test: test tightness of the pipe and valve system

Blockage test: localizes clogged pipes

Malfunction message: error messages in plain text

VACUUMING WITHOUT FILTER IS NOW POSSIBLE!

THREE-FILTER-SYSTEM

Thanks to the three-filter-system the exhaust air can be filtered up to almost 100 percent. BVC guarantees with this highly modern filter technology maximum hygiene and best protection against house dust allergies and asthmatic illnesses.

HEPA 13 filter

The High Efficiency Particulate Airfilter is used if the exhaust air can not be routed to the outside (e.g. passive house). The HEPA 13 filter cleans the exhaust air up to 99,95 percent.

Motor protection filter

The motor generates a vacuum, which pulls the motor protection filter upward. The filter prevents dust particles from entering the engine compartment and filters the exhaust air. After use the motor protection filter falls back into starting position.

Filter bag

The filter bag is crucial for a hygienic and comfortable dust disposal. The filter bag has a volume capacity of 16 liters.

Motor protection filter

The motor protection filter in the BVC BLACKLINE consists of CORDURA® textile fabric. CORDURA® keeps even fine dust particles away from the motor. That extends the lifetime of the central vacuum cleaners.

With this high efficient CORDURA® motor protection filter vacuuming without filter is now possible!

CORDURA® fabrics:

- 10 x more resistant to abrasion than cotton
- 3 x more resistant to abrasion than polyester

INLET VALVES

Inlet valves suitable for your home.

In our product range we also offer inlet valves made of aluminium and metal.

VACUUM HOSES

SWIVEL central vacuum hose with potentiometer for electronic suction control

The SWIVEL central vacuum hose has an integrated potentiometer for valuable electronic suction control at the hand grip. The 360° swiveling socket connection facilitates the handling while vacuuming.

Available in the hose lengths 6 m, 7.5 m, 9 m and 12 m.

Also available as accessory set with 5 or 7 pieces!

This is a brief overview of our BVC product range. Visit www.bvc-zentralstaubsauger.de to see all products and detailed information. The BVC Website is also available in English.

NOZZLES

BVC has nozzles and brushes for different requirements. Please find the complete product range on www.bvc-zentralstaubsauger.de or contact your BVC partner.

Turbo-nozzle for upholstery,
airdriven, inkl. Universal-
adapter, 16 cm wide

Turbo-brush
for short piled carpets,
airdriven, 28 cm wide

Combination nozzle, adjustable
for carpets and smooth floors,
28 cm wide

Nozzle with horse hair bristles
for smooth floors, black,
30 cm wide

Nozzle with plastic bristles
for smooth floors
36 cm wide

Flexible crevice nozzle
z.B. for the cleaning between
seats, 440 mm long

VACPAN - AUTOMATIC DUSTPAN

With the VacPan you are able to quickly and easily remove crumbs and other kinds of dirt without using a central vacuum hose. The VacPan is installed flush-mounted to a baseboard, cabinet kickboard or wall. By moving the kick switch to the „on“ position with your foot, the central vacuum cleaner starts. Sweep dirt towards the VacPan inlet and watch the dirt disappear. Perfect for kitchens, entrance areas, garages or beauty salons.

Available in the colors stainless steel, black and white.

Kehrfix „Vacpan“ Set „flex“

including cover (plastic), connecting knee and 75 cm flexible connecting tube for 50 mm connection.

MULTI-FLEX: VACUUM PERFORMANCE CAN BE CHANGED INDIVIDUALLY

crevice nozzle

furniture brush

upholstery nozzle

The MULTI-FLEX vacuum hose convinces with its three integrated nozzles in the hand grip. The suitable nozzle is always at hand. The three-stage-switch starts the motor of the central vacuum cleaner. The vacuum power can be varied from OFF to 50% and 100%. Available in the hose lengths 6 m, 7.5 m, 9 m and 12 m.
